

The Role of the Distributive Training Technology Project in the Spousal Telework Employment Project

The National Guard Distributive Training Technology Project (DTTP) is a national learning and information delivery system providing Guardsmen and their communities broad access to education, training and information for development of new skills, life-long learning and enhanced quality of life.

The core business concept of the DTTP is the idea of public-private partnerships sharing the Project's technology on a fee for service basis. DTTP classrooms will provide access to information-age technologies such as:

- Audio and video teleconferencing – live 2-way audio and video
- Computer-based learning
- Video programming
- Interactive audio and video technologies
- Electronic mail and electronic network access (Internet based)

Classrooms are located in armories, local schools, libraries, assisted-housing and other community centers. The objective is to make schools and other community sites the technology hub for the entire surrounding community, to ensure access and usage of the facilities.

These are the sites that will be used by the participants in the Spousal Telework Employment Project (STEP).
